CA Identity Lifecycle Management Rapid Implementation

Implement an Effective Identity Lifecycle Management Solution That Delivers Rapid Results

Identity lifecycle management (ILM) replaces traditionally siloed implementations with a lifecycle-based model that automates key identity-related processes while enhancing security compliance. CA Services has the experience and the proven methodologies needed to help you implement an ILM solution rapidly and with lower risk.

Supporting Your Business

The CA Identity Lifecycle Management Rapid Implementation deploys CA Identity Manager in an initial bounded deployment that delivers results quickly.

CA architects and consultants work with you to develop solution design and integration specifications that include implementation and test plans. The specifications are built to extend and enhance your capabilities in identity provisioning, rules and roles-based access management, and compliance management. Once the design and integration specifications are validated, the CA team installs, configures, tests, and documents the products and functions defined.

Delivering Business Value

The CA Identity Lifecycle Management Rapid Implementation:

- Accelerates time-to-value by providing a bounded deployment that gets you up and running quickly
- Reduces the risk of security infrastructure deployment mistakes
- Helps you leverage CA Identity Manager for basic provisioning, reporting, and password management
- Delivers achievable implementation and test plans
- Improves efficiency through application of best practice methodologies
- Speeds deployment and staff learning curves

What You Get

CA Identity Lifecycle Management Rapid Implementation provides, for a fixed price:

- Basic foundational capabilities including:
  - Provisioning of basic enterprise roles
  - Provisioning of up to five connectors from three managed end system types
  - Self-service password management
  - Basic OOTB reporting
- Additional options available after initial deployment:
  - Configuration of either a basic data feed or an advanced feed to address customer-specific solution requirements
  - Configuration and verification of high availability
  - Provisioning of up to five additional connectors from five managed end system types
- Project management services including a project plan, schedule, and ongoing reporting
- Analysis of your environment in support of the blueprint design
- Development of a solution specification containing business requirements and goals, business use cases, solution components and configurations, solution architecture and physical architecture, solution impact, implementation and test plans and success criteria
- Installation, configuration, and testing of CA Identity Manager in defined in-scope environments
- Configuration and backup documentation
- Staff mentoring
- The purchase of CA Education that may be applied towards any courses currently available from the catalog or CA Education website

Why CA Services?

By leveraging our proven nine-stage deployment methodology, best practices, and expertise, CA Services can help you implement CA products in a way that shortens time-to-value and lowers project risk. When it comes to deploying CA solutions, no other organization can provide the depth of expertise, breadth of services, and partner network required to help you achieve the efficient IT management that drives business results.
