# CA Workload Automation Rapid Implementation

## Automate the Workflow of Enterprise-wide Applications

Leverage the expertise of CA Services personnel to deploy your choice of two CA workload automation products to simplify workload definitions and dynamically automate complex workloads. Reduce project complexity with a carefully managed and phased implementation that delivers business value quickly.

## Meeting Business Requirements

The CA Workload Automation Rapid Implementation is a bounded, fixed-price service that deploys your choice of either CA AutoSys® Workload Automation or CA Workload Automation (formerly dSeries). Working within the parameters of the Statement of Work, our team works with yours to help:

- Centralize management and monitoring of job scheduling for the enterprise
- Protect against interruption of service due to network and database failures
- Manage workload schedule definitions and monitor scheduling workload
- Provide job history and job status reporting history
- Provide role-based access to ensure users access the appropriate information
- Reduce overhead through standardization
- Reduce cost and improve quality, consistency, and stability of workload processes

## Delivering Business Value

Your CA Workload Automation Rapid Implementation includes the design, installation, and configuration of your chosen software product to help:

- Improve workload automation service quality
- Maximize workload automation efficiency
- Assist with regulatory compliance
- Reduce cost of workload automation service
- Reduce implementation risk
- Achieve faster-time-to-value with defined outcomes

## What You Get

Our project manager works with yours to create a project plan and schedule that meet your requirements. Working with this plan, our team:

- Reviews and validates the solution requirements, including business requirements and expected outcomes, business model, quality attributes, and solution constraints
- Creates the solution design including architecture models, impact, quality attributes and validation approach, and finalizes a test plan
- Reviews the infrastructure requirements and installs and configures either CA AutoSys Workload Automation or CA Workload Automation, and up to 10 agents, within the parameters of the Statement of Work
- Executes solution and use case tests
- Assists your staff to complete backups and develops and documents operational and maintenance procedures
- Transfers knowledge of architecture, configurations and functionality to members of your operations staff

In addition, the purchase of CA Education is recommended. You may choose relevant courses currently available from the catalog or listed on the CA Education website. A smooth transition to CA Support is accomplished through the Go Live with CA program.

## Why CA Services?

By leveraging our proven nine-stage deployment methodology, best practices, and expertise, CA Services can help you implement CA products in a way that speeds time-to-value and lowers project risk. When it comes to deploying CA solutions, no other organization can provide the depth of expertise, breadth of services, and partner network required to help you achieve the efficient IT management that drives business results.

CA Services is part of the Customer Value Network (CVN) which brings together CA Services, Education, Support, Communities and Partners to deliver programs, communications, events and offerings to enable your success

## Get Started
