

CA Identity Lifecycle Management Solution Implementation

Implement an Effective Identity Lifecycle Management Solution

Identity lifecycle management (ILM) replaces traditionally siloed implementations with a lifecycle-based model that automates key identity-related processes while enhancing security compliance. CA Services has the experience and the proven methodologies needed to help you implement a solution with faster time-to-value and lower risk.

Service That Supports Your Business

The CA Identity Lifecycle Management Solution Implementation deploys CA Identity Manager and/or CA Role & Compliance Manager in 60–90 day engagement phases for rapid time-to-value.

CA architects and consultants work with you to develop solution design and integration specifications that include comprehensive phased-implementation and test plans. The specifications are built to extend and enhance your capabilities in identity provisioning, rules- and roles-based access management, role management and compliance management — and to deliver results quickly in manageable phases. Once the design and integration specifications are validated, the CA team installs, configures, tests and documents the products, workflows, features and functions defined.

Benefits That Deliver Value

The CA Identity Lifecycle Management Solution Implementation:

- Leverages CA consultants and partners who have CA Identity Manager and CA Role & Compliance Manager expertise
- Reduces the risk of security infrastructure deployment mistakes
- Delivers achievable implementation and test plans structured in 60–90 day phases so you see results quickly
- Identifies and documents feeds, connectors, workflows and customizations needed within your enterprise identity, role and compliance management systems
- Improves efficiency through the application of best practice methodologies
- Matures your security infrastructure by matching CA security product features and functions to your business requirements and goals
- Speeds deployment and staff learning curves

What You Get

CA employs a proven nine-stage deployment methodology-based process that includes:

- Project management services including a project management plan, schedule and ongoing reporting
- Assessment of the “as is” state of CA Admin, CA Identity Minder and CA Identity Manager (if deployed) and preparation of a blueprint that helps you visualize a rationalized and streamlined “to be” state using current CA security products
- Development of a solution architecture and design
- Development of a solution specification that contains:
 - › Business requirements and goals
 - › Key business-use cases
 - › Solution components and configurations
 - › Solution architecture and detailed physical architecture
 - › Solution impact, implementation and test plans, and success criteria
- Installation and configuration of CA identity Manager and/or CA Role & Compliance Manager in defined in-scope environments (unit and QA testing in each)
- Customization and integration deployment
- Full configuration and backup documentation
- Staff mentoring and training

Why CA Services?

By leveraging our proven nine-stage methodology, best practices and expertise, CA Services can help you implement CA products in a way that shortens time-to-value and lowers project risk. When it comes to deploying CA solutions, no other organization can provide the depth of expertise, breadth of services and partner network required to help you achieve the efficient IT management that drives business results.
