

CA Endeavor Software Change Manager Version 18.x: Overview 100

Course Overview

Software development and deployment involves many steps and stages and can be slow and prone to errors when these steps are manually performed. CA Endeavor SCM is an integrated set of management tools used to automate, control, and monitor the mainframe software development lifecycle. It can automate your entire development process, adapting to your specific business requirements and helping ensure consistency and complete control.

CA Endeavor Software Change Manager (SCM) automates the entire development process, providing complete change and configuration management and supporting the unique lifecycles of each organization.

This course will show you how to plan the software lifecycle with CA Endeavor SCM, how to use element actions to develop, manage, and control software changes.

PRODUCT RELEASE
