- 06END10170

PREREQUISITES

- Knowledge of the CA Endeavor platform

WHO SHOULD ATTEND

- Application Developers
- Quality Control Engineer
- Development Manager
- QA Manager
- Product Manager
- Change Administrator

Course Overview

Software development and deployment involves many steps and stages and can be slow and prone to errors when these steps are manually performed. CA Endeavor SCM is an integrated set of management tools used to automate, control, and monitor the mainframe software development lifecycle. It can automate your entire development process, adapting to your specific business requirements and helping ensure consistency and complete control.

CA Endeavor Software Change Manager (SCM) automates the entire development process, providing complete change and configuration management and supporting the unique lifecycles of each organization.

This course will introduce you to planning the software lifecycle with CA Endeavor SCM, how to use element actions to develop, manage, and control software changes.

What You Will Learn

- Describe the Key Features of CA Endeavor SCM
 - Describe Change Management Issues
 - Identify Change Management Solutions
- Describe Key Concepts and Terminology
 - Plan the Software Lifecycle with Endeavor
 - Identify Inventory Structure and Management

For Managers

CA Endeavor SCM automates your entire development process, providing the flexibility to adapt to your organization's specific business requirements while ensuring consistency and complete control.

A complete understanding of this product will enable your Application Developers to categorize and protect software assets and maintain application integrity.
