

# OnDemand CA Endeavor® Software Change Manager V17: Advanced End User Actions 200

---

## PRODUCT RELEASE

CA Endeavor Software Change  
Manager V17

---

## COURSE TYPE, LENGTH & CODE

- Web Based Training (WBT)
- One (1) Hour
- 06END20090

## Course Overview

IT organizations are under enormous pressure to deliver on requirements faster without compromising on quality. CA Endeavor Software Change Manager (CA Endeavor SCM) can automate your entire development process, adapting to your specific business requirements and helping ensure consistency and complete control.

This course covers powerful options for advanced end users, including Automated Configuration Manager (ACM) and Parallel Development Manager (PDM). You will learn about the ACM option, which automatically detects and records information about configuration relationships and the ACM Query Facility (ACMQ), which enables you to perform impact analysis using a simple panel-driven process. The course also covers the PDM option, which saves significant time by simplifying the management of multiple code branches. Attending this course will help you to gain insight into these powerful options.

---

## What You Will Learn

- Quickly perform "where-used" queries against ACM component data using the ACMQ
- Effectively manage concurrent development using the PDM option

---

## For Managers

CA Endeavor SCM enables your team to address the various obstacles you need to overcome to implement an efficient change management solution. For example, manual definition of program-component relationships is error-prone and time-consuming by today's standards. In addition, it is important to be able to quickly obtain the component information you need when you need it. Furthermore, developers need to be able to work on the same code simultaneously, without interfering with each other's work. In this course, your team will be shown how to use powerful options to more effectively address these specific challenges.

---

## PREQUISITES

- A working knowledge of the mainframe environment, the z/OS mainframe operating system, Time Sharing Option facility (TSO), and the Interactive System Productivity Facility (ISPF), knowledge of the CA Endevor SCM platform, and familiarity with writing and developing code.
- CA Endevor Software Change Manager V17: Introduction 100 06END10140
- OnDemand CA Endevor Software Change Manager V17: End User Fundamentals 06END20100

---

## WHO SHOULD ATTEND

- Application Developer
- QA Engineer
- Development Manager
- QA Manager
- Product Manager
- Program Manager
- Change Administrator

---

## RECOMMENDED NEXT COURSES

- CA Endevor Software Change Manager V17: Package Processing 200 06END20120

---

## Course Agenda

### Module 1 – Manage Dependencies Using ACM

- Manage dependencies using the ACMQ

### Module 2 – Manage Concurrent Development Using ACM

- Describe PDM
- Describe how to build the WIP file
- Describe how to merge the WIP file
