Course Overview

Software development involves many steps and stages and can be slow and prone to errors when these steps are performed manually. CA Endeavor Software Change Manager (CA Endeavor SCM) is an integrated set of management tools used to automate, control, and monitor the mainframe software development lifecycle. It can automate your entire development process, adapting to your specific business requirements and helping ensure consistency and complete control. By eliminating the manual steps that slow software deployments, CA Endeavor SCM can help provide you with greater efficiency and fewer errors.

As an application developer using CA Endeavor SCM, the concepts and demonstrations in this training can help you develop the knowledge and skills to effectively perform element actions to develop, manage, and control software changes, which can help to accelerate code movement through the application development lifecycle. This training will also help you develop the knowledge and skills to effectively use CA Endeavor SCM to perform development tasks in the foreground, perform batch processing, and view inventory information.

What You Will Learn

- Identify how application developers use CA Endeavor SCM to perform development tasks.
- Use CA Endeavor® Software Change Manager Quick Edit (CA Endeavor Quick Edit) to perform typical development tasks in CA Endeavor SCM.
- Use native CA Endeavor SCM to perform typical development tasks.

For Managers

CA Endeavor SCM automates your entire development process, providing the flexibility to adapt to your organization's specific business requirements while ensuring consistency and complete control throughout the software development lifecycle.

A complete understanding of this product will enable your application developers to categorize and protect software assets and maintain application integrity. At the end of this course, application developers in your organization will be able to effectively perform development actions within CA Endeavor SCM while following software change management processes defined for your organization.
