

Optimizing CA Database Administration for DB2 for z/OS 100

PRODUCT RELEASE

DB2 Tools Database Administration

COURSE DURATION & COURSE CODE

- Web-Based Training
- Two (2) hour
- Course Code: 06DBT10100

PREREQUISITES

- None

WHO SHOULD ATTEND

- Database Administrators (DBA)
- Chief Information Officer (CIO)
- Director of Operations
- Data Center Manager
- Director of Compliance
- Performance Analysts
- Application Developers
- System Programmers

Course Overview

The CA Database Administration Suite is a function-rich set of integrated tools that use automated administration with high-speed technology to control the rising costs of database management and improve service levels. CA Database Administration Suite tools reduce or eliminate data availability issues and streamline maintenance. This course is designed to help you understand the key features and benefits of the tools in the CA Database Administration Suite. In addition, the course will use simulations to demonstrate the capability of each tool in the suite.

What You Will Learn

- Identify the main features and benefits of each product in the CA DB2 Tools Database Administration Suite
- Recognize opportunities for using a product from the suite to improve efficiency and reduce costs
- Recognize opportunities for using multiple products to address a business problem

For Managers

The CA Database Administration Suite can enable your System Administrators and Developers to spend more time on proactive database performance improvements and less on maintenance activities.

An understanding of the key features and benefits of the tools in the CA Database Administration Suite will help your System Administrators and Developers choose the right tools that improve efficiency and increase productivity.

Course Agenda
