

CA NetMaster® Network Management for TCP/IP r12.1: Navigating through NetMaster 200

PRODUCT RELEASE

CA NetMaster Network Management for TCP/IP r12.1

COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- 45 Minutes
- Course Code: 06NMR20060

PREREQUISITES

- None

WHO SHOULD ATTEND

- Network Operators

Course Overview

Recent trends in mainframe network management have created the need for products with well-designed interfaces that help you to more easily and quickly perform management and monitoring activities. CA NetMaster Network Management for TCP/IP enables you to efficiently monitor network health, tune performance, and diagnose and fix issues before they are likely to affect business operations.

In this course, you will be shown how you can monitor and manage your IP networks from consolidated, enterprise-wide 3270 and web browser displays. You will be shown how to use the 3270 interface to display information about z/OS mainframe IP network activity. The course also covers the WebCenter interface, from where you can more easily conduct performance monitoring, diagnostics, and reporting tasks. Learning to use the interfaces more effectively will make you more productive and improve your ability to anticipate and resolve problems. This will help ensure that your service-level goals are met, outages are minimized, and performance is maximized.

What You Will Learn

- Explore the features and functions of the 3270 interface, which enables you to monitor IP network activity and diagnoses issues with your mainframe IP network resources.
- Explore the features and functions of the WebCenter interface, which provides an alternative for users who prefer web browsers over terminal emulators for performance monitoring, diagnostics, and reporting.

For Managers

Proactive network management means anticipating and correcting issues before they become problems for your business and its users. CA NetMaster Network Management for TCP/IP helps you meet or exceed service levels, maintain high availability, improve user experience, and minimize outages while maximizing performance in a more cost-effective manner. In this course, your team will be introduced to the 3270 and WebCenter interfaces. Awareness of the available features and functions help your team to manage the network more rapidly and cost effectively.

Course Agenda

Module 1 – Explore the 3270 Interface

- Identify the features and functions of the 3270 interface

Module 2 – Explore the WebCenter Interface

- Identify the features and functions of the WebCenter interface
