

CA AutoSys® Workload Automation Solution Implementation

Create an Automated Workload Environment

Accelerate the design and delivery of complex workload processes by leveraging CA Services specialists to deploy CA AutoSys Workload Automation. Get a solution that best meets your business goals and provides the reliability and scalability you need for workload orchestration. Achieve a new – or upgraded – workload automation investment that better supports your enterprise-wide, mission critical applications.

Meeting Business Requirements

Leverage the best practice expertise of CA Services to create and deploy a methodology-based architecture, implementation, and test plan that delivers:

- Centralized workload automation across your heterogeneous computing environment
- Automates and monitors workloads with a standardized solution and processes

If you are upgrading to CA AutoSys® Workload Automation r11 this service helps you take advantage of product improvements in scalability, manageability and resource optimization. The solution is fully integrated with CA Workload Control Center (CA WCC), and with it, you gain end-to-end visualization of business processes across client-server, mainframe, and cross-platforms through a consolidated, web-based management console.

Delivering Business Value

The CA AutoSys Workload Automation Solution Implementation helps you:

- Improve workload automation service quality while effectively delivering reliable IT service to the business
- Maximize workload automation efficiency, which reduces external spending and unnecessary procurement
- Reduce failed job mean-time-to-repair, improving service availability
- Reduce implementation risk
- Achieve value from your software product investment more quickly

What You Get

The duration of a CA AutoSys Workload Automation Solution Implementation is determined by the complexities in your IT environment. During this engagement, the CA consulting team:

- Analyzes your current business and technical operating environment to identify the most important business objectives for your deployment and develops the appropriate solution
- Deploys CA AutoSys Workload Automation and CA WCC in a development, test and/or production environment
- Tests in a controlled environment prior to production rollout
- Transfers knowledge on product features and functions as they relate to your business requirements, goals and workload needs
- Provides assistance with production rollout
- Upgrades your current CA AutoSys Workload Automation installation (optional)

Why CA Services?

By leveraging our proven nine-stage deployment methodology, best practices, and expertise, CA Services can help you implement CA products in a way that speeds time-to-value and lowers project risk. When it comes to deploying CA solutions, no other organization can provide the depth of expertise, breadth of services, and partner network required to help you achieve the efficient IT management that drives business results.

CA Services is part of the Customer Value Network (CVN) which brings together CA Services, Education, Support, Communities and Partners to deliver programs, communications, events and offerings to enable your success.
