

CA SERVICES:

Idea Vision Integration for CA Clarity Project and Portfolio Management

Idea Vision Integration for CA Clarity™ Project and Portfolio Management

we can

What it does

Idea Vision Integration for CA Clarity™ Project and Portfolio Management (CA Clarity PPM) enables data exchange between CA Idea Vision and CA Clarity PPM. CA Idea Vision provides an idea management workspace whereby a community can generate, share, vote on and offer commentary on ideas in an easy-to-use portal. Idea Vision Integration for CA Clarity PPM allows promotion of ideas from CA Idea Vision to CA Clarity PPM which provides greater control for tracking, managing and elevating ideas to project status.

CA Clarity PPM enables the idea-to-project lifecycle. Once an idea is migrated to CA Clarity PPM, data can flow to the originating idea portal so that there is continuity throughout the idea and project management lifecycles. Specifically, if the status changes, it will be communicated back to the originating community.

An idea that has been moved to CA Clarity PPM always maintains links back to the ideas in CA Idea Vision, so as the idea moves through the idea-to-project lifecycle, an active community remains linked to the idea.

Idea Vision Integration for CA Clarity PPM includes an installation package, documentation, and remote services to help install, set up, test and verify solution deployment. Customers will also receive knowledge transfer for their staff.

Benefits that deliver value

Idea Vision from CA Clarity PPM:

- Provides an interactive, dynamic workspace that fosters idea creation, exchange and debate with low process overhead
- Enables user communities to keep track of ideas and their status from the idea portal as the idea is assessed and developed prior to elevation to a CA Clarity PPM project
- Allows for extended idea management and idea conversion into CA Clarity PPM projects
- Maintains the relationship between the community, the idea and the CA Clarity PPM project

How it works

The solution is comprised of two core components:

- **CA Clarity PPM inbound process** – This is a work flow that can be scheduled or executed real-time to pull data from CA Idea Vision which houses the idea portal
- **CA Clarity PPM outbound process** – This is a work flow that can be scheduled or executed real-time to push data back to the originating idea portal

The stock attributes which can move from CA Idea Vision to CA Clarity PPM include:

- Title
- Body
- ID
- URL
- Vote Total
- Vote Score
- Status
- Parent Idea ID
- Number of Comments

Five additional custom attributes may be added during implementation.

Technical prerequisites

- CA Clarity PPM version 12
