

# Deployment Pack for CA Introscope® with IBM WebSphere DataPower

agility  
made possible™

## What it does

The Deployment Pack for CA Introscope® with IBM WebSphere DataPower monitors performance metric of IBM WebSphere DataPower appliances and the services deployed on them.

## Benefits that deliver value

The Deployment Pack for Integration for CA Introscope® with IBM WebSphere DataPower:

- Helps administrators monitor and address performance of IBM WebSphere DataPower appliances
- Helps administrators identify the root cause of bottlenecks to the DataPower appliances before users or business services are affected

## How it works

The solution includes:

- Periodical queries of its web service interface for system and domain metric data including
  - Memory usage
  - XML translation statistics
  - Active users
  - File system status
  - Style sheet
  - CPU usage
  - HTTP connections usage
- Holistic view of how the application services are performing

---

## Technical prerequisites

- IBM DataPower Appliance with XML Management interface enabled
- CA Introscope v7 or higher
- Sun JDK 1.5 or higher
