

CA CloudMinder™ Identity Management

At a Glance

As organizations constantly seek to expand their market reach and attract new business opportunities, identity management (specifically user provisioning and management) has evolved as an enabling technology to mitigate risks and improve operational efficiencies. As the shift to cloud-based services increases, identity management capabilities can be delivered as hosted services to help drive more operational efficiencies and to improve business agility. CA CloudMinder™ Identity Management combines the power of a reliable user provisioning and user management solution with the benefits of a hosted, cloud-based deployment model.

Key benefits/results

- Reduced cost of ownership through cloud hosting reduces deployment time and accelerates ability to leverage cloud's elastic capabilities.
- Automated identity management service improves operational efficiencies, thus minimizing deployment and management costs.
- Broad application support of commercial on-premise applications (from distributed to mainframe) and cloud services.

Key features

User management. Enable end users to initiate self-service, profile creation, password reset and forgotten password and user name.

User provisioning to cloud services. Quickly provision users to cloud services, including adding, deleting and changing users and their association to a given group or role.

Hybrid provisioning to enterprise applications. Organizations can provision to cloud services but also from the cloud back to on-premise applications.

Access request for cloud and/or enterprise applications. Users can make self-service requests for access to new applications and services, routing approvals through workflow based on defined policies.

Secure operations. CA Technologies 24x7x365 scalable and secure hosting infrastructure and operations helps organizations efficiently deploy, manage, replicate and migrate complex distributed applications along with their binaries, data, configurations and dependencies, as single manageable entities.

Business challenges

Manage the identities and access of a diverse user base. Organizations must manage identities across a wide range of applications and user populations (employees, partners, customers) while managing operational costs effectively.

Support need for greater operational agility. IT organizations must be able to support a greater range and scale of users and systems and be able to support new business initiatives quickly and efficiently.

Mitigate IT risks. Today's IT risks continue to increase in scale and sophistication and as the organizational tolerance for risk is lowered, organizations must find secure methods to manage identities, entitlements and policies without unnecessarily increasing risk.

Solution overview

CA CloudMinder Identity Management combines the power of a reliable user provisioning and user management solution with the benefits of a hosted, cloud-based deployment model. Whether your organization is interested in provisioning to cloud-based applications and on-premise applications or providing user management for end users, CA CloudMinder Identity Management provides robust capabilities for user management, user provisioning, and access requests. Deploying this solution in the cloud means you can be up and running faster while minimizing the ongoing overhead of managing related infrastructure, software or facilities. This unique combination can provide a better experience for end users while reducing operational overhead.

Critical differentiators

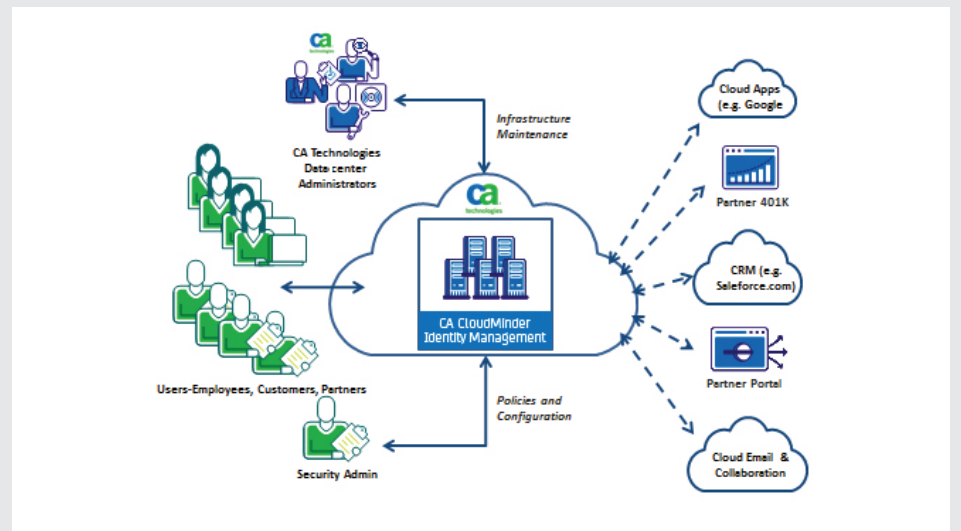

CA CloudMinder Identity Management combines the power of a user provisioning solution with the convenience of a cloud-based service. CA CloudMinder Identity Management provides robust capabilities for user provisioning and deprovisioning to on-premise applications and cloud services as well as comprehensive user management capabilities. CA CloudMinder Identity Management can also help accelerate deployment time as well as reduce the ongoing costs associated with managing a traditional on-premise application. Combining the proven capabilities and scalability of CA IdentityMinder™ with the cloud can help organizations maintain business agility and operational efficiency while simultaneously minimizing administrative overhead.

Related products/solutions

CA IdentityMinder provides user provisioning and deprovisioning, user management and centralized control of all users, roles, and policies to deliver an integrated identity management and governance solution on premise.

CA SiteMinder® Federation is a cloud-based federation solution that provides single sign-on (SSO) and single logout across federated security domains using industry standard protocols like SAML.

CA CloudMinder Identity Management provides user provisioning and user management as a hosted cloud service.

Agility Made Possible: the CA Technologies advantage

With IT Security solutions from CA Technologies, you can reduce risk, reduce IT and security management costs, protect critical assets, and simplify compliance across complex IT environments. Protecting business information is critical to your company's success. To thoroughly safeguard your entire IT environment, you need identity and access management capabilities, but also control over how information is used. IT Security solutions from CA Technologies can give you the control you need over your physical, virtual, and cloud IT environments—so you can protect your business and the information on which it relies. IT Security solutions from CA Technologies are part of our broad portfolio of solutions designed to help increase your business agility and ultimately out-innovate the competition.
