

# CA Enterprise Log Manager Solution Implementation

## Implement an Effective Enterprise Log Management Solution

CA Enterprise Log Manager is a high-performance log management solution that helps simplify IT activity compliance reporting and reduce the cost and complexity of proving compliance. CA Services has the experience and the proven methodologies needed to help you implement a solution with faster time-to-value and lower risk.

### Supporting Your Business

The CA Enterprise Log Manager Solution Implementation deploys CA Enterprise Log Manager in 60-90 day engagement phases for rapid time-to-value.

CA architects and consultants work with you to develop solution design and integration specifications that include comprehensive phased implementation and test plans. The specifications are built to extend and enhance your capabilities in log management and compliance reporting — and to deliver results quickly in manageable phases. Once the design and integration specifications are validated, the CA team installs, configures, tests and documents the products, workflows, features and functions defined.

### Delivering Business Value

The CA Enterprise Log Manager Solution Implementation:

- Accelerates time-to-value
  - Speeds deployment and staff learning curves
  - Delivers achievable implementation and test plans structured in 60-90 day phases so you see results quickly
- Improves cost and operational efficiencies
  - Improves efficiency through the application of best practice methodologies
  - Identifies and documents log sources, IT activity reports, and alerts required within your enterprise log management system
  - Matures your security infrastructure by matching CA security product features and functions to your business requirements and goals
- Reduces project risks
  - Reduces the risk of security infrastructure deployment mistakes
  - Leverages CA consultants and partners who have CA Enterprise Log Manager expertise

## What You Get

CA employs a proven nine-stage deployment methodology-based process that includes:

- Project management services including a project management plan, schedule, and ongoing reporting
- Development of a solution architecture and design
- Development of a solution specification that contains:
  - Business requirements and goals
  - Key business use cases
  - Solution components and configurations
  - Solution architecture and detailed physical architecture
