

CA Automic Continuous Delivery for Temenos T24

At A Glance

CA Automic Continuous Delivery for Temenos allows you to streamline your core banking application releases, providing both agility and reliability. It also enables you to accelerate the deployment of new capabilities and features, enhancing customer experience as well as ensuring regulatory updates to aid compliance.

KEY BENEFITS

- End-to-end value delivery: Manage complex value streams and dependencies—always know the business impact of the pipeline.
- Visibility and analytics: Get insights into app delivery performance and release readiness to continually improve.
- Compliant and secure: Access complete, end-to-end audit trail and shift security checks left. Improve security via refraining users from having direct access to the operating system and/or Temenos Core Banking commands.

KEY FEATURES

- Model-driven releases: Enable consistent, repeatable processes regardless of environment
- Rapid results: Achieve results quickly by leveraging best practice out-of-the-box integrations for Temenos T24 release activities.

Business Challenges

To stay agile and deliver digital transformation, banks and other financial institutions must automate the release processes for Temenos core banking apps.

Solution Overview

The unique CA Automic Continuous Delivery for Temenos solution delivers Temenos core banking deployments and releases with the speed and agility typically experienced by Mode 2, digital frontend systems. Using CA Automic Continuous Delivery for Temenos, banks and other financial institutions achieve their agile, digital transformation strategies more quickly and securely—and at lower cost.

Most vendors offering DevOps, application release automation or continuous delivery solutions focus on Mode 2 applications—modern, digital and cloud-native apps. CA Technologies views IT and DevOps in a broader context, providing continuous delivery for both Mode 1 and Mode 2 applications. CA Automic Continuous Delivery for Temenos enables agility to core backend banking applications such as Temenos while also providing greater compliance, safety and scale to modern cloud-native digital applications.

CA Automic Continuous Delivery for Temenos allows banks and other financial institutions to join the DevOps revolution and create a broader continuous delivery pipeline that blends Temenos core banking deployments with the deployments of other tangent or dependent systems.
