

CA Automic Dollar Universe

At A Glance

CA Automic Dollar Universe automates and optimizes IT workloads in today's high volume, hybrid, heterogeneous environments—whether complex or simple. Its real-time, event-driven fully distributed architecture guarantees your business processes complete on time, in a reliable, reportable and measurable fashion. CA Automic Dollar Universe offers innovative, decentralized architecture that delivers high resilience even in tough environments and limits the risk of a single point of catastrophic failure. Clocks, calendars, events and alerts can all be combined with complex dependencies to drive efficiently the most critical IT processes you need to run your business.

KEY BENEFITS

- Enhances visibility and control on critical processes and enhances alignment between business and IT operations.
- Improves quality of service by eliminating unnecessary manual intervention and reducing the number of errors.
- Increases performance by accelerating service delivery and eliminating latency and bottlenecks in IT processes.

KEY FEATURES

Multi-platform scheduling allows you to manage and visualize a business process end-to-end, across platforms from a central point of control.

Event-driven automation allows event-driven communication between application servers, eliminating any overhead that might incur when polling to check status.

Easy job design delivered by a consumer-style, drag-and-drop Web interface simplifies the creation of jobs and job flows.

Workload analytics provide real-time activity monitoring and historic performance metrics used to forecast when application processes will complete.

Lifecycle management with dedicated staging zones for development, test, QA, training and production enables a smooth, safe transition when testing changes to IT workload and going live.

Business Challenges

IT operations is the vital backbone of any successful enterprise, indispensable for the flawless, ultra-responsive fulfillment of customer needs that today's business world demands. But with greater responsibilities come greater challenges.

Today, IT operations needs to contend with a landscape that is changing more rapidly than anyone could have envisioned just a few years ago. The hurdles are loftier, the timeframes shorter and the stakes higher than ever before.

- **Growing complexity.** Business processes have now become very complex, often interconnecting applications across heterogeneous platforms or hybrid clouds. Managing these processes without a tool offering clear visibility is error prone and inefficient, consequently impacting business operations.
- **Exploding demand.** A lack of integration prevents systems and applications from growing as business users would expect. Scaling IT in a heterogeneous environment can be cumbersome and costly. This hinders operations' agility, and impedes the ability to embrace innovation and support business growth.
- **Mounting risk.** With so much riding on IT operations, the tiniest failure of technology or service disruption can have an immense impact on your business. And you can't just cross your fingers and hope for the best.

Solution Overview

CA Automic Dollar Universe provides a high level of integration with leading packaged and custom applications as well as operating systems—enabling you to reduce turnaround times when automating the end-to-end processes that drive your business.

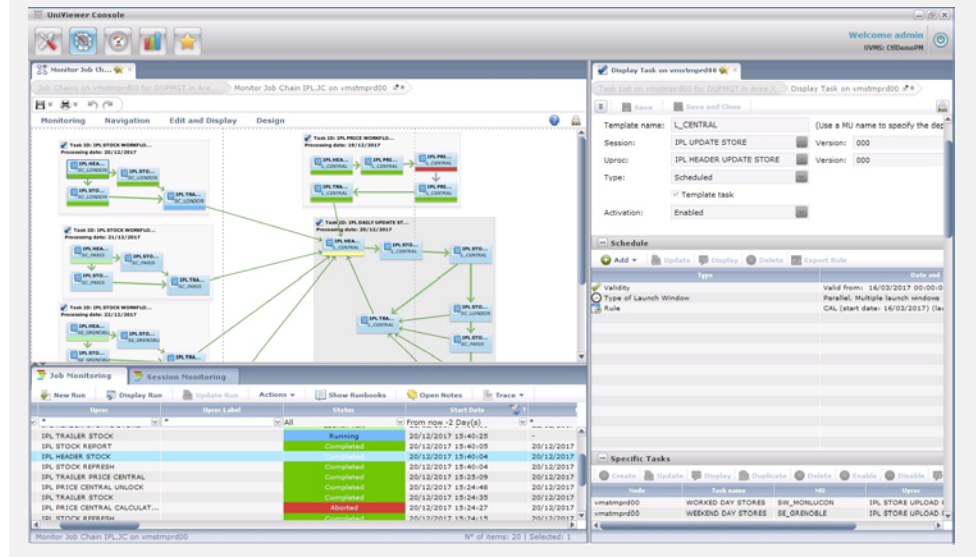

It delivers the pan-enterprise visibility and control you need to manage processing inside applications along with the hand-offs between them—eliminating errors and delays. Its peer-to-peer architecture makes the software easy-to-deploy and easy-to-scale, while limiting by design the risk of a single point of catastrophic failure.

CA Automic Dollar Universe's intuitive workflow design tool provides a straightforward graphical job creation, offering clear visibility of the whole automated process. The user interface comes fully featured with complete monitoring and forecasting, presented in a variety of views. The reporting and auditing functionalities offer total process execution traceability, ensuring compliance with even the most demanding enterprise regulations.

Critical Differentiators

- **Distributed automation service:** Each CA Automatic Dollar Universe automation point is equipped with full automation capabilities, ensuring workloads that are rerouted following a failure can be managed until the problem is resolved.
- **Low latency:** Direct communication between CA Automatic Dollar Universe servers removes latency and the impact of any network issues, as there is no check-in with a master scheduler to determine what to do next.
- **Dynamic load balancing:** Intelligent balancing and regulating of workload across CA Automatic Dollar Universe servers maximizes the use of available computing power—ensuring the timely delivery of information your users require to get on with their jobs.
- **Centralized administration and control:** Get the best of both worlds combining a single-point-of-control from which you can manage all your IT workload combined with a uniquely scalable, highly fault-tolerant distributed architecture.
- **Business application integrations:** Proven interfaces ensure you can manage and monitor IT workload inside your strategic ERP, CRM and HR applications as part of your enterprise automation strategy.
- **Pay-as-you-grow:** Add more CA Automatic Dollar Universe servers just when needed—no hardware upgrades or heavy configuration changes required. Helps you handle unpredictable growth of demand and avoid costly over-provisioning.

CA Automatic Dollar Universe centralizes and simplifies workload automation through a single point of control.
