

# CA Output Management Web Viewer

## At a Glance

CA Output Management Web Viewer (CA OM Web Viewer) offers a single web-based point of access to all enterprise documents. The solution enables users to perform numerous actions based on their roles and security profiles, such as view, print, save, email and export text documents stored on any of the CA Output Management report repositories (CA View®, CA Dispatch™ or CA BUNDL®).

### Key Benefits/Results

- Reduced cost of maintaining the product
- Reduced time to install, deploy and configure the product
- Decreased network traffic and associated costs
- Improved end-user productivity
- In-house 24/7 experienced support
- Improved operational efficiency
- Increased management control

### Key Features

- Platform independent
- Allows for online viewing of selected reports managed by CA View®, CA Dispatch™ and/or CA BUNDL® without requiring the expertise of these mainframe products
- Ability to view non-mainframe formatted reports such as PDFs
- Reduced paper costs and going green by eliminating unnecessary printing or, if required, printing only the section(s) of reports needed
- Single sign-on authenticated access
- Certified with current browser technologies
- A Web Services facility, allowing access to reports via a Web Programming API

## Business Challenges

Turning data into usable information is the primary objective of any IT organization. The vehicles for delivering this information to your end users are printing, emailing, or presenting online. Helping ensure the security and timely delivery of these reports and documents, as well as the ease with which they can be viewed, is essential for maximizing employee productivity. End users can vary from a wide range of job titles, such as bank tellers, super market produce managers, programmers and CTOs, just to name a few. CA Output Management Web Viewer (CA OM Web Viewer) provides the tools to ensure the right information is available for web viewing by the right people, at the right time, in the right format.

## Solution Overview

Increase your efficiency while viewing your enterprise reports with a Web based report viewing application. CA Technologies offers real-time, secure access to report content, providing you with fast access to report information from a single, secure, Web-based interface. By advancing your output and reporting capabilities, you can better address compliance and green initiatives—while having fast access to reports with a click of the mouse, saving on printer related cost and improving the security of your business information.

## Critical Differentiators

CA OM Web Viewer provides the following critical differentiators that help deliver greater business value to your enterprise IT management infrastructure:

Single point of access for enterprise documents results in the elimination of costs associated with mass hard copy report distribution or system overhead of sending large files, and provides a system for viewing controlled documents.

Intuitive web-based GUI enables end-user report viewing procedures to move away from the complications and limitations of mainframe terminals. End users can utilize powerful tools provided by Output Management repository products with the click of a mouse, including logical views, cross report indexes, annotations and user comments. The ease of use of CA OM Web Viewer can facilitate significantly improved employee efficiency.

Improved enterprise data management enables end users to maintain control over their data base on individual business needs, at their own workstations. Report lists are easily customized by advanced filtering techniques and user preferences so that relevant reports can be found quickly. Users have the ability to browse reports using advanced searching mechanisms, and to save, print, email, or export reports.

CA Output Management Web Services is a free component of CA OM Web Viewer. It provides a flexible programming interface and enables custom applications to call the APIs that access the Output Management report repositories.
