

## At a Glance

CA View® is an automated archival and retrieval system that provides immediate and flexible online viewing of mainframe and distributed output. Its repository is capable of housing many types of documents and file types to give you an easy mechanism for selectively viewing and managing a variety of data types. CA View integrates with other solutions to automate the flow of reports between mainframe and distributed platforms, offering a solution that grows with changing business needs.

### Key Benefits/Results

**Reduce print related costs** with a single point of access for enterprise reports saves paper, printer, filing and microfiche costs.

**Secure information distribution** so users access only what they need.

**Automate storage management** supports adherence to compliance regulations.

**Cross-document searches** with cross-report and multi-level indexing for immediate availability of reports.

### Key Features

**Job Mode** enables the user with the ability to search for jobs based on job names, condition codes and start and end date and time, as well as being able to see, print and email all or individual DDs for the job.

**Secure logical viewing facility** for mainframe document processing environment provides consistent, transparent access to and between centralized and distributed documents and reports.

**Viewable access** provides transparent access to and between centralized and distributed documents and reports.

**Long term archival** supports report retention management of to meet corporate, industry and government guidelines.

**Report Writer** provides easy extraction of CA View SARGRW metadata similar to RMOGRW in CA Deliver.

## Business Challenges

Many organizations utilize the mainframe to create and process thousands of enterprise documents on a daily basis. These organizations must automate and streamline the handling of this large volume of reports to help ensure optimal business operations. CA View fills the growing need for report management demands. It is a scalable, extendable solution that significantly reduces time and resource-intensive manual report management. CA View adds additional functionality to help improve the user experience in using and administering the products.

**Resource intensive manual reporting demands** increase costs and slows down delivery of information to end users.

**Managing multiple document formats** between mainframe and distributed platforms reduces enterprise report management software performance.

## Solution Overview

CA View provides an online environment for storing and viewing computer generated output. You can select portions of any report and set options to view and print only the pages you need. By automating day-to-day report management, CA View helps to minimize time-consuming manual tasks and lower document delivery costs. With CA View's online visibility, fewer reports are printed, saving paper and printing costs and reducing the time spent reformatting, tracking, handling and re-running reports.

**Immediate viewing access** while reducing printing and manual delivery results in tremendous cost savings

**Secured logical viewing facility** enables document customization using powerful report administration tools for secure and efficient distribution of information, helping to ensure that users have access only to the information they need. Features, such as logical views, report indexing and report annotations criteria, help reliably determine which documents—or portions of documents—can be printed, modified and made available for viewing.

**Long-term archival** helps disaster recovery, prevents costly job reruns with automated storage management provides the ability to adhere to strict compliance regulations by maintaining archived versions of controlled reports based on specified retention periods.

**Content browsing of operational data** enables the capability to search for and view jobs with the familiarity of the z/OS® JES queue.

**Database backup and recovery** features and DR tape functionality provide reliable mechanisms to help ensure the safety and integrity of critical enterprise report data.

## Critical Differentiators

**Immediate viewing and printing** of multiple data formats includes vendor-specific and industry standard formats.

**Report writer capability** gives CA View administrator ability to some self-service reporting.

**Passphrase support** is now available to logon to CA View via TSO or CICS.

**Composite keys** can be created from non-consecutive places on a report page which allows for more search capability.

## Related Products/Solutions

**CA Deliver** provides managers, administrators and operations staff with the tools they need to manage and reduce the cost of report distribution.

**CA Web Viewer** delivers a secure, web-based access point for the distribution and viewing of reports and related documents.

**CA Spool™** provides print management, content transformations and file transfer capabilities.

Job Modes — search for jobs based on job names, condition codes and start and end date and time, as well as being able to see, print and email all or individual DDs for the job.
