

CA Automic for Oracle PeopleSoft

At A Glance

CA Automic for PeopleSoft brings the expertise to assist you in bridging IT processes and business requirements effectively, without error-prone human interaction. This alignment of your business processes to your IT infrastructure provides an incredible amount of flexibility. The elimination of human intervention allows for consistent and reliable straight-through processing. The process becomes more predictable and auditable.

KEY BENEFITS

- Business processes run faster by optimizing PeopleSoft application processing and orchestrating every step of the business process.
- Fewer errors are made due to extending checks for business level errors to every stage of the process.
- Visibility and control are increased by managing every step of the process as it runs across PeopleSoft and other enterprise applications.
- Staff time is freed by eliminating the need for them to manually set parameters for jobs.

KEY FEATURES

- **A single point of control** enables all processes running on PeopleSoft Process Schedulers and other applications to be monitored and their statuses displayed in a single window.
- **Enterprise process integration** lets users create workflows that include jobs from PeopleSoft, as well as other enterprise applications.
- **Conditional business rules** allow users to easily define business rules that can be applied before, during and after a process or job executes in PeopleSoft Enterprise.

Business Challenges

PeopleSoft is a mission-critical ERP application suite for many companies today. But the business processes that run on PeopleSoft extend beyond the PeopleSoft environment to run across other applications, which may reside on-premises, in the cloud or in hybrid environments. The complexity of this IT landscape introduces processing inefficiencies and creates application siloes—the bottlenecks to business agility.

Like many ERP applications, PeopleSoft Process Scheduler permits individuals to submit jobs—typically reports that provide the user with needed information—on an ad hoc basis. This is a valuable feature, but ad hoc jobs can consume scarce computing resources and often prevent regularly scheduled jobs from running on time. An advanced automation solution that delivers value over and above PeopleSoft Process Scheduler can ensure batch application integration, data integration, and application scheduling are addressed effectively, and best practices incorporated.

Solution Overview

CA Automic for PeopleSoft is an industry-leading automation solution that allows companies to transition from opportunistic, point solutions to an enterprise-wide, systematic approach. It enables companies to optimize PeopleSoft EnterpriseOne application processing and integrate PeopleSoft with the business process applications they support. This greatly improves processing performance, provides visibility of the entire process and ensures PeopleSoft investments are fully exploited.

CA Automic for PeopleSoft Enterprise integrates with the PeopleSoft Process Scheduler and is an Oracle Validated solution. The integration leverages the PeopleTools interface, communicating with the PeopleSoft application server through the PeopleSoft Component Interface. Working with the PeopleSoft Process Scheduler, CA Automic for PeopleSoft Enterprise launches processes, tracks their status, and retrieves output. It also runs and monitors all PeopleSoft processes, including SQR Reports, Application Engine, Crystal Reports, nVision, and Cobol SQL.
