CA Unified Infrastructure Management 8.5

Top five reasons to upgrade

When it comes to monitoring dynamic and cloud-based environments, CA Unified Infrastructure Management (CA UIM) 8.5 goes beyond the competition to deliver the most comprehensive coverage of currently available, standalone IT monitoring solutions on the market. Plus, get even more when you upgrade to our most recent version of software, including:

- **Improved multitenancy**
- **Lower footprint with better scale**
- **Enhanced security**

What is CA UIM 8.5?

With CA UIM 8.5, you get a single platform that provides a unified view to manage your entire IT infrastructure, including servers, mainframe, storage, databases, virtual machines and cloud—so you can optimally manage hybrid IT environments and reduce mean time to repair by up to 40 percent.[1] CA UIM is the only solution that provides unified analytics to proactively resolve issues; its single platform architecture delivers comprehensive infrastructure coverage and efficiency to meet the needs of agile IT operations. Advantages of upgrading to CA UIM 8.5 include:

Service-Centric	Unified	Proactive	Efficient	Relevant
Surface specific details of services and applications across hybrid, complex infrastructures to boost service reliability.	Unified management of all infrastructure elements reduces complexity and mean time to repair.	Advanced and comprehensive analytics help you proactively avoid issues before user experience is impacted.	Scales with minimum resources to meet your needs and provides plug-and-play capabilities for future needs.	Gets the right information to the right person at the right time through intuitive, persona-based insights and workflows.

Throughout the past two years, CA Technologies has accelerated the CA UIM release schedule to adjust to your rapidly evolving business requirements, which means you may not have the most recent version of the software. On the following page, we break down the benefits of upgrading, depending on what version of the software you're running.

Top Five Reasons to Upgrade to CA UIM 8.5

1. **Provides log analytics.** The new Log Analytics probe allows for collection and consolidation of network and server logs into the CA Technologies Open Elastic Platform. The platform will provide dashboards and log analytics to improve problem identification and resolution.

2. **Provides a solution from the market leader in cloud monitoring.** CA UIM 8.5 is the market-leading product in monitoring cloud technologies in terms of the breadth and depth of the cloud and virtual technologies it supports, which include Amazon Web Services (AWS), Nutanix, OpenStack, Docker, Pure Storage, and SDN/NFV.

3. **Reduces time to configure devices by 90 percent.**[2] New monitoring configuration services enable better configuration across groups of devices via a single, intuitive user interface. These capabilities are easy to learn and apply across various technologies, and ideally suited for large-scale deployments and DevOps environments.

4. **Provides dynamic data visualization.** CA UIM 8.5 provides modern, dynamic visualizations of metric and alarm data. Regardless of whether views are created out of the box or by users, you gain increased insight into business intelligence from CA.

5. **Speeds time to monitor.** Application-centric configuration and reporting ensures monitoring in compliance with best practices.

"CA UIM is at the heart of our cloud strategy. And the new capabilities to support Amazon Web Services and OpenStack will be essential in helping us optimize our customer workloads. We'll become more efficient, whilst still meeting the full range of needs from both our internal, and external, customers."

Zafir Yousaf, O2-Telefonica, U.K.

"More and more of our customers are looking to use cloud platforms such as Nutanix for private cloud and AWS for public cloud, and the comprehensive monitoring capabilities in CA UIM are key in enabling us to ensure the performance and reliability of the diverse set of platforms top initiatives."

Kevin Langford, Director, Managed Services, Sirius Computer Solutions

Primary Features of CA UIM

CA Unified Infrastructure Management	
Feature	**Description**
Most comprehensive coverage for cloud and hybrid IT	Enables you to proactively monitor performance of your cloud and Hybrid IT environments through a single solution.
Unified views and dashboards	With CA UIM, your organization can leverage unified, prepackaged dashboards and custom views that deliver visibility into all the IT systems, networks and services that matter to the organization.
Multitenant architecture	Allows managed service providers, cloud providers and corporate IT to efficiently scale and personalize service offerings for one or many clients.
Robust, predictive analytics	With CA UIM, you can leverage predictive analytics capabilities that help you proactively identify issues before user experience suffers.
Intuitive, sophisticated visualization, alarms and reporting	Boost service levels through accelerated problem resolution, proactive issue prevention and prioritization of IT support efforts that align with your business value goals.
Plug-and-play architecture	Our unique plug-and-play architecture enables you to add new monitoring services on demand, which makes adding monitoring support for a new technology as easy as downloading a new application to your smartphone. Rather than requiring additional products or bolt-on workarounds to monitor the latest technology, our flexible, modular and scalable architecture allows you to rapidly add new monitoring functionality without disrupting your existing environment.
Correlational analysis	With the solution's correlational analysis, you can identify and track relationships between performance variables and IT infrastructure elements, and spot patterns over time. These insights make it easy and fast for your IT teams to find the root cause of issues, resulting in a lower mean time to resolution.
Open, extensible APIs	Support every layer within the monitoring environment, including presentation, application, message bus and data collection. This comprehensive set of integration and automation points provides the capabilities needed to integrate monitoring with any layer of cloud or IT infrastructure management.

All capabilities are described in the **product information guide**.

By upgrading to CA UIM 8.5, you gain enhanced security, performance and usability thanks to extensive, quality-focused engineering efforts that reduced defects throughout UIM by more than 50 percent.[3]

EFFICIENCY	AGILITY	ADOPTION
60%	**45%**	**60%**
60% less time spent in monitoring[4]	Fewer service desk tickets[5]	Faster cloud adoption rate[6]

Frequently Asked Questions

From what releases can I upgrade?

You can upgrade directly from UIM 8.0 or newer to 8.5. Older versions going back to 6.5 can be upgraded to 8.1 and then to 8.5.

Will my data and configuration be preserved during an upgrade?

Yes, all data and configuration information is preserved through an upgrade to get you up and running quickly on 8.5 (although we always recommend a system backup just to be safe).

How long does it take to upgrade?

That depends on the size of your infrastructure. You can work with one of our engineers to determine the time frame.

Can I upgrade on my own or do I need to buy services from CA?

You can upgrade on your own.

If I need to buy services from CA how much will it be?

The investment in services depends on the size and scope of your infrastructure. You can contact CA Services at https://www.ca.com/us/contact/services.register.html

What is the ROI associated with upgrading?

Contact one of our ROI Coaches to learn about the value of upgrading.
