

A man in a grey blazer and white t-shirt is pointing at a wireframe chair displayed on a large screen in a meeting room. He is smiling and appears to be explaining something to a group of people. The screen shows a 3D wireframe model of a chair. The background is a bright, modern office setting with large windows.

CA Brings DevOps to Mainframe

Why customers choose CA Technologies

Achieve Greater Business Agility

If you don't provide the applications that customers expect, they'll find someone who will. To stay ahead of the competition, you need a modern software factory that includes your mainframe. Why? Because **55% of apps touch the mainframe**¹ and **5 billion lines of COBOL are added to live systems yearly.**²

Because **the mainframe drives mission-essential apps and services** for many organizations, it's critical to adopt DevOps and agile processes, toolsets and cultures to achieve the innovation velocity that you need to keep up with the competition and customer demands.

CA enables just that with end-to-end mainframe DevOps—*on* the mainframe and *with* the mainframe—for **greater business agility** that fuels **better time to market** and **better mobile-to-mainframe collaboration.**

CA Delivers Innovation that Unifies Mobile to Mainframe

CA enables system orchestration from a holistic view that spans your entire enterprise—one where the mainframe is not an exception but a participatory and integral part of your IT infrastructure, yesterday, today and tomorrow.

Agile Development

Develop and maintain mainframe applications with agile and modern methodologies, toolsets and coding languages.

Continuous Testing

Reduce test cycle times and mainframe testing costs for better time to market and mainframe economics.

Continuous Delivery

Remove the barriers to business agility on the mainframe, with automation to reduce time to market and manage skills gaps.

Agile Operations

Unify monitoring and performance management across mobile and mainframe teams for better mean time to resolution and lower skills costs.

Organizations leverage CA mainframe solutions for application development, quality and testing and software change management.

See why customers are choosing CA when evaluating competitive DevOps for Mainframe solutions, and the benefits they've achieved since making the switch.

CA Brings DevOps to Mainframe

What Our Users Say

In a recent user survey of CA Gen, CA Endeavor® Software Change Manager and CA Application Lifecycle Conductor, half of respondents experienced increasing performance pressure—an indicator of a DevOps environment—higher customer quality expectations and greater frequency of software releases and delivery.³

What Our Users Say

 IT Central Station

CA Endeavor SCM
is ranked the
#1 SCM vendor

IT Central Station, Best Software Configuration Management Vendors, Sep 2016
https://www.itcentralstation.com/categories/software-configuration-management#top_rated

What Our Users Say

By adopting CA products,
customers are realizing
impressive results:

On average, customers saw at
least a **70% increase** in team
productivity.
