

CA PA for CA PPM 15.x: Building Custom Reports 300

Course Overview

Having the right data at your fingertips is critical for making decisions in a software-driven business environment. Facilitating access to project-related data is a key focus of CA Project & Portfolio Manager (CA PPM). By creating reports using the method that suits your experience and circumstance, you can assist your organization in meeting its business reporting goals.

This course will help simplify the report creation process and improve report performance. It will guide you through the steps to configure JasperSoft Studio to connect to CA PPM. You will also be taught several methods to create queries. Regardless of the method you adopt, you will be shown how JasperSoft Studio provides you with the means to quickly create a report from your query and how CA PPM enables you to add them to the Advanced Reporting interface. You will also be taught to schedule a report for distribution, assign appropriate permissions and rights to users, and modify default CA PPM reports. This training is based on CA PPM classic interface. This training is appropriate for CA PPM 15.1, CA PPM 15.2 and CA PPM 15.3.

PRODUCT RELEASE

CA Project & Portfolio Manager
15.x
