US Public Sector Services from CA Technologies

At a Glance

US Public Sector Services from CA Technologies help federal agencies, state and local governments and educational institutions fulfill their missions with a broad portfolio of IT services with a focus on cloud, consolidation, virtualization, big data and mobility. Whether through disruptive technologies or evolutionary enhancements, US Public Sector Services from CA Technologies drive mission success through innovative thinking, reliable execution and efficient delivery of solutions.

We can help public sector customers gain more value from IT investments, make the most of resources and achieve the agility and cost savings needed to address key priorities, initiatives and the complex challenges that your organization faces.

Key Outcomes

- **Enable mission success** and deliver innovation with skilled resources when and where you need them.
- **Build, maintain and secure modern IT infrastructure** for protection of critical data for maximum results and reduced cybersecurity risk.
- **Optimize budget outlays** through flexible solutions that align resources to your IT requirements.
- **Address key initiatives with specific talent** to meet key mandates and agency objectives.

Key Services Features

- **Broad portfolio of services** to address the spectrum of technologies, platforms and requirements
- **30 years of industry insight and experience** gained from diligently working with public sector customers to address your specific IT needs
- **Recognized by industry analysts as technology leaders** in a wide range of domains including identity and access governance, project and portfolio management, application services governance, cloud system management, service management and more

Business Challenges

In today's environment of budget reductions, security threats, change and uncertainty, your agency still needs to achieve its mission and deliver a higher level of quality services to your customer—the citizens. But how does your organization capture that operational efficiency and cost savings with limited resources? You may face challenges that include:

- Cybersecurity imperatives
- Budget constraints
- Technology skills gaps
- Complex missions combined with OMB and federal initiatives and mandates
- How to best leverage cloud computing for greater efficiencies

US Public Sector Services from CA Technologies provides skill and insight accrued from over 30 years of experience serving almost every federal agency and scores of state and local government customers. Our innovative and flexible portfolio of services can help you deliver high performance IT solutions while being a trusted steward of agency and taxpayer dollars.

Offering Overview

Our multidisciplinary US Public Sector Services team is uniquely prepared to help you accelerate with virtualization, transform with cloud, drive mainframe innovation and secure the public enterprise for greater efficiency. We can provide the services you need to help you fulfill your agency mission.
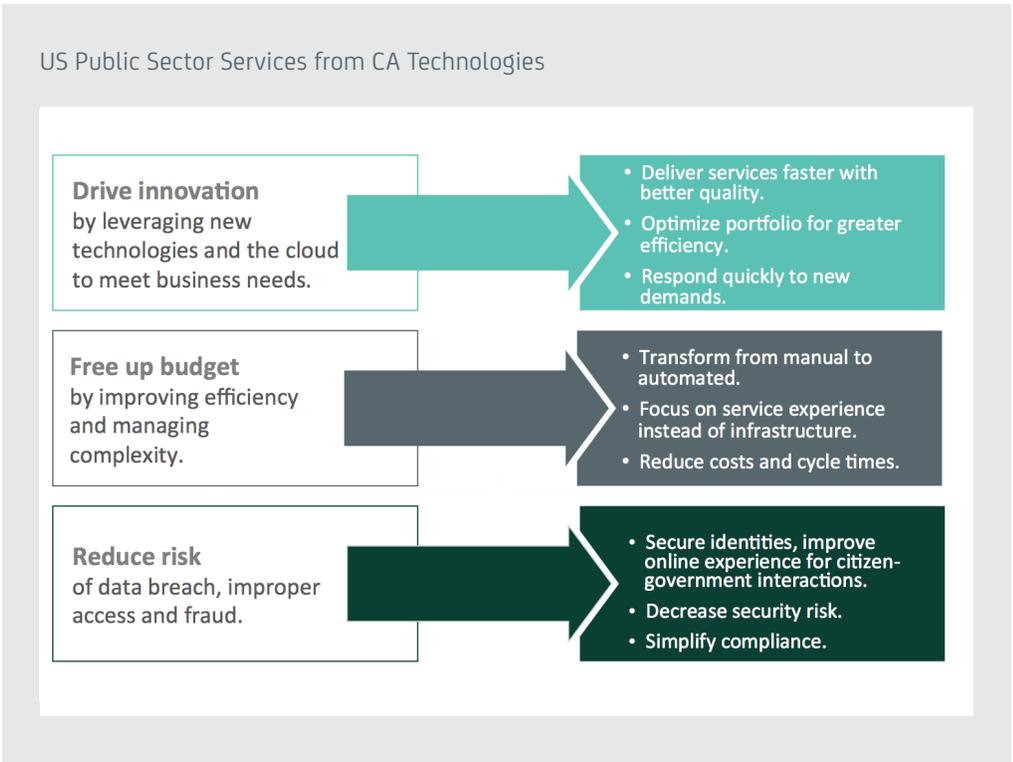

Cloud services help you advance through the physical-to-virtual-to cloud journey to embrace new cost saving IT service delivery models.

Virtualization services help enable quick ROI and time-to-market by establishing a virtual data center, consolidating hardware and more.

Mainframe services can help you save resources, power, personnel support and software licensing costs. CA Services has extensive real-life experience serving some of the world's largest government organizations and managing large data centers.

Operations and maintenance services experts have the experience to provide you with day-to-day operational and administrative support of your agency's critical IT infrastructure and to help you maximize time, resources and budget.

Implementation services can provide flexible, low risk deployment of CA Technologies solutions that focus on business outcomes. CA Services professionals can help your agency achieve quicker ROI and help deliver the value you require to move your organization forward.
