

CA Identity Suite 14.x: CA Identity Portal - Create Access Request Processes 200

PRODUCT RELEASE

CA Identity Suite 14.0

Course Overview

As the keepers of the keys, IT organizations have traditionally chosen identity management solutions that make their jobs easier—without giving much consideration to their impact on business users. But, by delivering an inconvenient and inefficient user experience, IT could be hindering business productivity and growth. The ideal solution creates a bridge between IT and the business, creating a convenient, intuitive “one-stop shop” for business users to obtain services and information from the identity management system. The CA Identity Suite bridges this gap by providing an easy to use self-service console, known as CA Identity Portal, which can improve business user productivity by delivering identity and entitlement data in a common business language, as well as a shopping cart experience for requesting access to new systems.

In this course, you will implement the key use cases for access requests and approvals in CA Identity Portal. By completing this course, you will be able to implement an intuitive, business-oriented user experience that dramatically simplifies the process of managing access requests and approvals.

COURSE TYPE, LENGTH & CODE

- Dynamic Labs
Five and a half (5.5) Hours
- Course Code: 04IMG2036S

What You Will Learn

- Identify the key features and benefits of CA Identity Suite.
- Create access request processes that assign provisioning roles, group membership, and endpoint entitlements.

PREREQUISITES

- Working knowledge of CA Identity Manager
- Working knowledge of CA Identity Governance

WHO SHOULD ATTEND

- System Administrator
- Security Administrator
- Application Administrator
- IT Security Analyst
- IT Security Auditor
- IT Architect
- Technical Support Analyst
- Partner
