CA Identity Suite 14.x: CA Identity Portal - Deploy Use Cases 200

PRODUCT RELEASE

CA Identity Suite 14.0

Course Overview

As the keepers of the keys, IT organizations have traditionally chosen identity management solutions that make their jobs easier—without giving much consideration to their impact on business users. But, by delivering an inconvenient and inefficient user experience, IT could be hindering business productivity and growth. The ideal solution creates a bridge between IT and the business, creating a convenient, intuitive "one-stop shop" for business users to obtain services and information from the identity management system. The CA Identity Suite bridges this gap by providing an easy to use self-service console, known as CA Identity Portal, which can improve business user productivity by delivering identity and entitlement data in a common business language, as well as a shopping cart experience for requesting access to new systems.

And with the recent introduction of the Deployment Xpress Marketplace, you can now select from a set of preconfigured, commonly used identity management use case templates that contain the basic structure and elements you need to easily implement identity management business processes, without having to develop them from scratch. In this course, you will deploy use cases from the Deployment Xpress Marketplace.

COURSE TYPE, LENGTH & CODE

- Dynamic Labs
  Six and one quarter (6.25) hours
- Course Code: 04IMG2037S

What You Will Learn

- Deploy pre-configured identity management use cases to get your implementation up and running really quickly.
- Implement robust self-registration and self-service capabilities that empower users.

PREREQUISITES

- Working knowledge of CA Identity Manager
- Working knowledge of CA Identity Governance

WHO SHOULD ATTEND

- System Administrator
- Security Administrator
- Application Administrator
- IT Security Analyst
- IT Security Auditor
- IT Architect
- Technical Support Analyst
- Partner

Course Agenda

Module 1: Deployment Xpress Overview	Module 2: Deploy Use Cases from the Deployment Xpress Marketplace
• Identify the key features of the Deployment Xpress Marketplace	• Deploy use cases for user lifecycle management • Deploy use cases for self-registration and self-service
Module 3: Customize Deployed Use Cases	**Module 4: Develop Use Cases from Scratch**
• Customize a deployed use case	• Create a use case from scratch
