PREREQUISITES

- None

Course Overview

The CA Identity Suite provides comprehensive identity management and governance capabilities with a simple, intuitive user experience. This user experience can dramatically simplify processes such as user access requests and access certifications, resulting in improved productivity and user satisfaction. While providing these business and governance-centric capabilities for business users, the CA Identity Suite also delivers core enterprise-grade identity management and governance capabilities for your IT organization.

In this course, you will identify the new features and enhancements in CA Identity Suite 14.2. Discover how the new Migration Xpress tool can help you easily migrate from a server-based deployment to the Virtual Appliance platform. In addition, we have exposed the core CA Identity Governance functionalities into the CA Identity Portal Admin UI, which allows for easier administration of CA Identity Governance universes and certification campaigns through an intuitive and user-friendly interface. This release includes many more enhancements, new platform certifications, as well as several important engineering improvements. Existing CA Identity Suite customers should strongly consider updating their deployment for the many benefits that this new release can provide.
