

CA Privileged Access Manager 3.X: Manage Access to Windows Servers

Course Overview

Enterprise organizations need a Next Generation Privileged Access Management Platform – enabling them to protect and manage systems and privileged users across hybrid environments, all from a single point of control.

This course topic describes how to create access policies with the various Windows connector components included in CA PAM. Begin by using the previously imported LDAP (MS Active Directory) user and device groups to create access policies with manual login. Next, use the Windows Proxy to change an account password on a remote server. Finally, fully automate the logon process with an administrator domain account.

PRODUCT RELEASE

CA Privileged Access Manager (PAM) 3.0.1 and greater

COURSE TYPE, LENGTH & CODE

- Web-Based Training (WBT)
- Thirty (0:30) minutes
- Course Code: 04PIM20450

PREREQUISITES

- None
- Attendees should have some knowledge of security, authentication systems and basic networking concepts.

What You Will Learn

- Create access policies for manual login to Windows servers using LDAP groups
- Use the Windows Proxy in a target application for automated login of local accounts
- Create access policies with automated login of domain accounts

For Managers
