

CA Privileged Access Manager 3.X: Manage Access to Web Portals

PRODUCT RELEASE

CA Privileged Access Manager (PAM) 3.0.1 and greater

COURSE TYPE, LENGTH & CODE

- Web-Based Training (WBT)
- Thirty minutes (0:30)
- Course Code: 04PIM20470

PREREQUISITES

- None
- Attendees should have some knowledge of security, authentication systems and basic networking concepts.

Course Overview

Enterprise organizations need a Next Generation Privileged Access Management Platform – enabling them to protect and manage systems and privileged users across hybrid environments, all from a single point of control.

This course topic describes how to create secure access to web portals. This feature is useful where privileged or administrative accounts are used on applications with a web based interface, such as Splunk. You will first create a Service that connects the user to the web site. You will then use the Learn function to teach CA PAM how to log in with vaulted credentials. Then you will fully automate the logon process.

What You Will Learn

- Create a TCP/UDP Service with the Web Portal application protocol
- Create a virtual device representing the target URL
- Use the Learn function to “teach” CA PAM the logon fields
- Fully automate the logon process

For Managers

CA Privileged Access Management will enable your team to properly manage users and entitlements, control IT systems, and conform to government regulations, which helps you to reduce costs, raise productivity, and increase user satisfaction.

WHO SHOULD ATTEND

- System Administrator
- Security Administrator
- Application Administrator
- IT Security Analyst
- IT Security Auditor
- IT Architect
- Technical Support Analyst
- Partner
- Sales
