

# CA Privileged Access Manager 3.X: Manage Access to RDP Published Applications

---

## PRODUCT RELEASE

CA Privileged Access Manager (PAM) 3.0.1 and greater

---

## COURSE TYPE, LENGTH & CODE

- Dynamic Labs
- One hour and thirty minutes (1:30)
- Course Code: 04PIM2048S

---

## PREREQUISITES

- None
- Attendees should have some knowledge of security, authentication systems and basic networking concepts.

## Course Overview

Enterprise organizations need a Next Generation Privileged Access Management Platform – enabling them to protect and manage systems and privileged users across hybrid environments, all from a single point of control.

This course topic describes how to create secure access to remote desktop published applications (RemoteApps). RemoteApps are often used to limit database administrators access to the servers supporting the databases they manage. You will first create an RDP Application Service that connects the database administrator directly to the database management console (MS SQL Server Management Studio) for manual logon. Then you will fully automate the process using the Transparent Logon feature.

---

## What You Will Learn

- RDP published application pre-requisites for Windows Server 2008 and 2012
- Configure an RDP Application Service for manual login to MS SQL Server Management Studio
- Automate the logon process using a Transparent Logon script

---

## For Managers

CA Privileged Access Management will enable your team to properly manage users and entitlements, control IT systems, and conform to government regulations, which helps you to reduce costs, raise productivity, and increase user satisfaction.

### WHO SHOULD ATTEND

- System Administrator
- Security Administrator
- Application Administrator
- IT Security Analyst
- IT Security Auditor
- IT Architect
- Technical Support Analyst
- Partner
- Sales

## Course Agenda

### Manage Access to UNIX/Linux Servers

- Use the Discovery feature to scan an IP address range for Devices
- Create an Access Policy for manual logon to UNIX Devices
- Vault credentials and use them in an Access Policy for automated logon to UNIX Devices
