

CA Privileged Access Manager 3.X: Improve Security with Credential Management

PRODUCT RELEASE

CA Privileged Access Manager (PAM) 3.0.1 and greater

COURSE TYPE, LENGTH & CODE

- Dynamic Labs
- Three hours (3:00)
- Course Code: 04PIM2049S

PREREQUISITES

- None
- Attendees should have some knowledge of security, authentication systems and basic networking concepts.

Course Overview

Enterprise organizations need a Next Generation Privileged Access Management Platform – enabling them to protect and manage systems and privileged users across hybrid environments, all from a single point of control.

This course topic describes how to implement Credential Management in CA PAM. Credential Management adds another layer of protection by masking the credentials used in your access policies. Standard users can be automatically logged in to target systems without knowing the passwords. Passwords are automatically changed base on events you select, and password complexity can be managed. Finally, you will learn how to use password management groups to control scope of your delegated administrators.

What You Will Learn

- Configure CA PAM to use email in credential management workflows
- Create password composition policies to manage password complexity
- Create password view policies to automate password changes on events
- Apply password policies to target applications and accounts
- Implement password management target groups to scope administrators

For Managers

CA Privileged Access Management will enable your team to properly manage users and entitlements, control IT systems, and conform to government regulations, which helps you to reduce costs, raise productivity, and increase user satisfaction.

WHO SHOULD ATTEND

- System Administrator
- Security Administrator
- Application Administrator
- IT Security Analyst
- IT Security Auditor
- IT Architect
- Technical Support Analyst
- Partner
- Sales
