

# CA Privileged Access Manager 3.X: Implement Command and Socket Filters

## Course Overview

Enterprise organizations need a Next Generation Privileged Access Management Platform – enabling them to protect and manage systems and privileged users across hybrid environments, all from a single point of control.

This course topic describes the implementation of Command Filters, which control what commands a user can execute, and Socket Filters, which restrict access to and from server-based devices.

---

### PRODUCT RELEASE

CA Privileged Access Manager (PAM) 3.0.1 and greater

---

### COURSE TYPE, LENGTH & CODE

- Dynamic Lab
- One (1) hour
- Course Code: 04PIM2050S

---

### PREREQUISITES

- None
- Attendees should have some knowledge of security, authentication systems and basic networking concepts.
