Course Overview

Enterprise organizations need a Next Generation Privileged Access Management Platform enabling them to protect and manage systems and privileged users across hybrid environments, all from a single point of control. CA Privileged Access Manager protects critical accounts and endpoints while providing a seamless user experience.

The following topics will review the new features and functionality introduced in CA Privileged Access Manager 3.2.

- Service Desk Upgrade
- PAM CLI – Windows Proxy Activation
- PAM RDP Client – Forward Secrecy
- Link Access Log with Request Log
- Audit APIs
- PAM CLI – Time-based Filtering of Password View Requests
- Credential Management – IBM I (Formerly AS/400)
- Mobile Support for Password Check In/Out and Viewing
- UI Logging Facility
- PAM on Microsoft Azure
