

CA Privileged Access Manager 3.2: Use Account, Services and Task Discovery Tools 300

SUPPORTED PRODUCT RELEASE(S)

CA Privileged Access Manager Release 3.2

COURSE TYPE, LENGTH & CODE

- Dynamic Labs (DL)
- Two hours (2:00)
- 04PIM3044S

Course Overview

Enterprise organizations need a Next Generation Privileged Access Management Platform – enabling them to protect and manage systems and privileged users across hybrid environments, all from a single point of control.

You will use the discovery feature to find target accounts, which is a more efficient alternative to manually adding and registering them. You will take these discovered accounts under management and limit password change capability to specific privileged accounts for tighter control. You will also discover and manage Windows Services and Scheduled Tasks using managed account credentials.

This course consists of two hours of SELF-DIRECTED learning including lab activities.

This Course Will Show You How To:

- Use account discovery to find and take accounts under management
- Use a privileged account to change passwords
- Discover and manage Windows Services and Scheduled Tasks using managed account credentials
