

CA Single Sign-On 12.6: New Features 200

Course Overview

As your organization's Web applications increase, you want to provide a seamless user experience by permitting your users to sign on once to access all of their applications while protecting your organization from breaches and other threats. With CA Single Sign-On (CA SSO), you get flexible and secure identity access management.

CA SSO provides secure single sign-on and flexible access management to applications and Web services on-premise, in the cloud, from a mobile device or a partner's site. With CA Technologies, integrated access control extends to API access and native mobile applications – thereby improving the user experience.

CA Single Sign-on provides a solution for authentication and authorization of users, and a complex engine for evaluating user entitlements. CA Access Gateway further expands the benefits of core Policy Server and Web Agent functionality by providing a reverse proxy solution. CA Access Gateway is a stand-alone server that provides a proxy-based solution for access control. CA Access Gateway employs a proxy engine that provides a network gateway for the enterprise and supports multiple session schemes that do not rely on traditional cookie-based technology.

In this course, you will quickly become familiar with the new features available with CA SSO r12.6 and CA Access Gateway r12.6.

PRODUCT RELEASE

CA Single Sign-On Release 12.6
CA Access Gateway Release 12.6

COURSE TYPE, LENGTH & CODE

- Web Based Training (WBT)
- One and a half (1.5) hours
- 04SSO20090

PREREQUISITES

- CA Single Sign-On 12.52.x: Foundations 200 (04SMR20431) or equivalent knowledge

WHO SHOULD ATTEND

- CA SSO Administrator
- IT Architect
- Technical support analyst
- Security specialists
- Partner (services delivery and presales)

What You Will Learn

- Understand how to successfully upgrade your current CA SSO platform
- Identify new features that will enable you to perform tasks quicker and easier in CA SSO
- Understand how to successfully upgrade to CA Access Gateway r12.6
- Identify new features that will help you more easily provide a proxy-based solution for access control

RECOMMENDED NEXT COURSES

- See the CA Education Learning Path for CA SSO

For Managers

CA SSO delivers unparalleled reliability, availability, scalability and manageability. Correct and efficient operation of CA SSO enables you to manage and deploy secure web applications to increase new business opportunities, manage costs, improve security to mitigate risk, and ease compliance. With the addition of CA Access Gateway, you expand the benefits of core Policy Server and Web Agent functionality with the provision of a reverse proxy solution. In this course, your team will be able to quickly become familiar with the new features available in CA SSO r12.6 and CA Access Gateway r12.6.
