

OnDemand CA Application Performance Management 10.x Analyze Application Performance in WebView 200

SUPPORTED PRODUCT RELEASE(S)

CA Application Performance Management 10.7

COURSE TYPE, LENGTH, & CODE

- Web-Based Training (WBT)
- 1.5 hours
- 20APF20630

Course Overview

To be successful, IT services and infrastructures need to be optimized, so that customer satisfaction does not suffer. By employing CA Application Performance Management (CA APM), you can help ensure the quality of service and quality of experience for your critical business applications to protect revenue opportunities, end-user productivity, and customer satisfaction.

The CA APM WebView tool allows a user to take a “deep dive” when diagnosing a problem in any monitored application environment. In this course, you will learn about several sections within WebView that are useful to help you understand an application and its environment.

This Course Will Show You How To:

- Monitor application performance on the Home tab
- Analyze metrics in the Investigator
- Trace the cause of an event with the Transaction Tracer
- Query historical events in the Historical Event Viewer
- Determine root cause of errors and stalls in the Live Error Viewer
- Use Blame Technology to trace performance problems
