

CA APM 10.x Describe Command Center Dynamic Lab 200

SUPPORTED PRODUCT RELEASE(S)

CA Application Performance
Management 10.7

COURSE TYPE, LENGTH & CODE

- Dynamic Lab
- .5 hours
- 20APF2091S

PREREQUISITES

- General familiarity with Java application servers

WHO SHOULD ATTEND

- IT Services Manager
- Any IT staff who needs to administer CA APM

Course Overview

CA Application Performance Management (CA APM) enables organizations to measure the business value of each user's experience, proactively identify problems based on impact, and help resolve problems across today's highly complex application environments before they affect users.

You need to understand the administrative functions of CA APM to successfully administer the product and gain more control of your business services.

This course provides students with fundamental concepts on CA APM Command Center (ACC) and how to manage users in ACC. Course instruction is web-based and includes self-directed learning and hands-on exercises that you can perform in a live CA APM virtual environment.

This Course Will Show You How To:

- Describe the APM Command Center Architecture
- Add an APM Command Center User
