

# CA APM 10.x Create Calculators Dynamic Lab 200

## SUPPORTED PRODUCT RELEASE(S)

CA Application Performance Management 10.7

## COURSE TYPE, LENGTH & CODE

- Dynamic Lab
- 1 hour
- 20APF2095S

## PREREQUISITES

- General familiarity with Java application servers

## WHO SHOULD ATTEND

- IT Services Manager
- Any IT staff who needs to administer CA APM

## Course Overview

CA Application Performance Management (CA APM) enables organizations to measure the business value of each user's experience, proactively identify problems based on impact, and help resolve problems across today's highly complex application environments before they affect users.

You need to understand the administrative functions of CA APM to successfully administer the product and gain more control of your business services.

This course provides students with fundamental concepts on using APM calculators to generate new metrics based on calculations performed on other metrics. Course instruction is web-based and includes self-directed learning and hands-on exercises that you can perform in a live CA APM virtual environment.

## This Course Will Show You How To:

- Create a Management Module calculator
- Create a JavaScript calculator
- Create a Virtual Agent calculator
