Course Overview

An effective business demands accurate, concise accounting of IT assets. CA IT Asset Manager Asset Portfolio Management (CA ITAM-APM) helps you manage the physical and financial aspects of hardware and software assets whether on-site, virtual, or in the cloud so you can reduce costs, automate asset lifecycle management, and enable vendor and contract optimization with a single integrated solution.

Through hands-on exercises, demonstrations, and work-related problems, this course will teach you to configure CA ITAM-APM to meet your organization's needs. You will discover how to customize labels and add fields and values that correspond to your organization's business needs and goals. You will also see how to create hierarchies to expedite data collection and organization. Overall, you will be provided with the knowledge to optimize the performance of CA ITAM-APM across your organization.

What You Will Learn

- Add to or alter the configuration of CA ITAM-APM to implement changes in line with your business processes or to adopt terms used by your organization.
- Customize a list, create a new extended field, and customize a field label.
- Enhance information access by building relationship templates and managing notifications.

For Managers

One of the key functions of your IT department is to manage assets to control inventory and costs. In this course, your employees will be taught how to configure CA ITAM-APM so your staff can effectively manage your organization's assets. By optimizing CA ITAM-APM performance, your employees will be able to provide the information you need to control costs and reduce noncompliance vulnerability.

WHO SHOULD ATTEND

- IT Asset Administrators
