

# CA Live API Creator 3.2: New Features

## 200

---

### PRODUCT RELEASE

CA Live API Creator 3.2

## Course Overview

Because of the competitive pressures arising from the application economy, enterprises need to develop API-based applications faster, unlocking stagnant value from data stores, and speeding the rate of innovation. Application development is being driven toward DevOps processes and microservices architectures that break monolithic applications into logical components that can be continuously developed and deployed for new projects. Big data and IoT are driving the explosion of data that needs to be collected, selectively exposed, and then monetized to create new business models. Today's enterprise, as it embraces digital transformation, needs to address these challenges to move forward.

With CA Live API Creator, a variety of users can create APIs using multiple API development methodologies, either from existing data sources or net-new applications, and significantly remove cost and time from the development process through automation and business logic enforcement. CA Live API Creator enables the rapid creation of application back-ends for internal applications, mobile development projects, data-as-a-service exposure, IoT enablement, and partner integration. It permits the decomposition of large applications into self-contained units containing everything necessary for app delivery: data integration, business logic, and a robust API interaction layer. And it does all this in minutes rather than months. In this course, you will quickly become familiar with the new features available with CA Live API Creator 3.2.

---

### COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- One (1) Hour
- 40LAC20030

---

### PREREQUISITES

- Working knowledge of CA Live API Creator 3.1

---

## What You Will Learn

- Understand the support for additional installation methods, which enables you to install CA Live API Creator in different configurations
- Identify the new available data sources, which enables you to quickly and easily connect CA Live API Creator to them
- Understand that you can now add virtual primary keys to views and tables that do not have primary keys, which enables you to access the view beyond a GET request
- Identify that you can now create a logger to externalize your API logs, which enables you to persist your CA Live API Creator log messages
- Understand other new features in CA Live API Creator, which enable you to more efficiently write code

**WHO SHOULD ATTEND**

- Implementation Consultant
- IT Developers
- IT Architects
- IT Security Manager
- IT Facility Coordinator
- Infrastructure Engineer
- Database Administrator
- API Owner/Administrator

**For Managers**

CA Live API Creator can dramatically reduce manual API creation and orchestration time and costs, facilitate your enterprise to create more APIs faster, and drive data-driven web, mobile, and composite apps. It also enables companies that have embraced API Management to expand the scope of their API lifecycle beyond management and enforcement in existing gateway and portal offerings towards the creation of APIs closer to the data layer. In this course, your team will be able to quickly become familiar with the new features available in CA Live API Creator 3.2.

**Course Agenda**

Module 1: Describe New Features and Enhancements	
<ul style="list-style-type: none"> <li>▪ Describe the additional installation support</li> <li>▪ Describe the support for new data sources</li> <li>▪ Examine updatable views</li> <li>▪ Examine updatable views</li> <li>▪ Describe other CA Live API Creator improvements</li> </ul>
