

CA Mobile API Gateway 4.1: New Features 200

PRODUCT RELEASE

CA Mobile API Gateway 4.1

COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- Ten (10) Minutes
- Course Code: 40MAG20140

PREREQUISITES

- Working knowledge of CA API Gateway 9.x and CA Mobile API Gateway 4.1

WHO SHOULD ATTEND

- Implementation Consultant
- Security Administrator
- Service Support Manager
- System Administrator
- Technical Support Manager

Course Overview

With the veritable explosion of mobile technology, the rise of the cloud, and the emergence of the Internet of Things, the enterprise today is being forced to expose data once considered sacred to a shareable asset outside the organization. The CA API Management suite provides enterprises with a comprehensive set of solutions that externalize the data and services exposed by APIs in a secure, reliable, and manageable way. In the suite, CA Mobile API Gateway provides centralized management of data exposed through APIs to mobile developers and apps.

CA Mobile API Gateway is a lightweight secure mobile backend for enterprises that integrates systems and permits control over which users, devices, and applications can access your APIs. In this course, you will quickly become familiar with the new features of this CA API Management product.

In this course, you will:

- Identify the new database-specific solution kits that are available with the MAG.
- Describe the enhanced support. MQTT traffic passes between MQTT clients and an MQTT broker via the Gateway, where policies such as security or filtering can be applied.
- Describe the new support for FIDO. New policies support Fast Identity Online (FIDO) authentication by providing easy connectivity to the biometric authentication servers that the Samsung SDS Nexsign provides.
- Identify additional 3rd party support. MySQL 5.7 is now officially supported.
- Define upgrade compatibility. When migrating from version 4.x to version 4.1, an upgrade compatibility script must be run before the update.

For Managers

The CA API Management suite provides enterprises with a comprehensive set of solutions that externalize the data and services exposed by APIs in a secure, reliable, and manageable way. In this course, your team will be able to quickly become familiar with the new features of CA Mobile API Gateway 4.1.

Course Agenda

Module 1: Describe New Features and Enhancements

- Describe the new database-specific solution kits
- Identify the enhanced MQTT support
- Describe the new support for FIDO
- Identify additional 3rd party support
- Define upgrade compatibility
