Overview

CA Continuous Delivery Director drives multi-app release planning and management, intelligent continuous testing and actionable analytics leveraging integrations across the DevOps toolchain. In this course, you will learn about the purpose of CA Continuous Delivery Director, how it orchestrates release deployment, and how it can be extended to work with third-party products.

As your organization adopts and enforces a Continuous Delivery methodology, your staff may struggle with bottlenecks and challenges. CA Continuous Delivery Director is an orchestration engine that enables you to leverage continuous delivery tools to form and manage a release pipeline. In this course, through presentation and demonstrations, your staff will learn about the basics of CA Continuous Delivery Director.

What Is Covered?

- The purpose of CA Continuous Delivery Director
- How the solution helps an organization in its continuous delivery journey
- Overview of the solution's features
