Delivery Edition 6.x: Installation  
88CDE20010  
Web-Based Training, 30 minutes

## WHO SHOULD ATTEND

- Cloud Architect
- DevOps Automation Engineer
- Integration Specialist
- Release Engineer
- Release Manager

## Course Overview

To make it possible for Release Engineers and Release Managers to perform their job tasks with CA Continuous Delivery Director, the Administrator must set up the environment to enable release management. Some topics in this course are necessary before releases can be created. Other topics represent the ongoing maintenance and management of the software itself.

## This Course Will Show You How To:

- CA Continuous Delivery Director is used by Release Engineers and Release Managers to build, schedule, execute, and monitor software releases. It can integrate with CA Technologies products and those from other companies related to the Continuous Delivery cycle of DevOps.
- The CA Continuous Delivery Director 6.x: Administration 200 course gives your staff the knowledge and skills they need to understand the overall product architecture and how to configure it, and how to troubleshoot issues, identify the source of an issue, and quickly resolve it.
