

CA Test Data Manager 4.x: Installation and Configuration 200

PRODUCT RELEASE

CA Test Data Manager 4.3

COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- Two (2) Hours
- 88TDM20120

WHO SHOULD ATTEND

- System Administrator
- Application Developer
- Application Analyst/Architect
- Quality Assurance Engineer
- Business Analyst

Course Overview

CA Test Data Manager 4.x: Installation and Configuration 200 course teaches the fundamentals for installing and configuring the CA Test Data Manager Components, the Repository Database, CA TDM Portal, and Datamaker for enterprise deployments of CA Test Data Manager. The course is web-based and comprised of demonstration videos to teach how to verify system requirements, download the correct installer files, install the software, and configure the components that make up a complete CA Test Data Manager Solutions installation.

What You Will Learn

- Where to review documentation and system requirements
- Where to find installation files
- How to configure and run CA Test Data Manager components for an Oracle or a Microsoft SQL Server database management system
- How to install the CA Test Data Manager web based portal
- How to connect and configure the repository
- How to uninstall CA Test Data Manager Server components

For Managers

The *CA Test Data Manager 4.x: Installation and Configuration 200* course is the fast track to learning nuances of installing the complete CA Test Data Manager component suite. With years of knowledge and experience provided by CA Test Data Manager professional services and support experts incorporated into the course, you can dramatically reduce the ramp-up time needed to perform an effective and efficient CA Test Data Manager Solutions installation.
