

# PreRelease: CA API Developer Portal v3.0: Foundations 200

---

## PRODUCT RELEASE

CA API Developer Portal v3.0

## Course Overview

This course aims to provide you with a functional understanding of the CA API Developer Portal product. You will follow a fictitious company, Voonair Airlines, as they add the Developer Portal to their existing CA API Gateway environment. Voonair Airlines needs a centralized hub to manage their APIs and to begin creating mobile applications for their customers. You will follow along as if you were an employee of Voonair Airlines to install, configure and integrate the Portal. You will then view the Portal from an external role of a developer as you register for the web site and begin to create new and innovative applications.

Your ability to understand concepts around common IT infrastructure and Linux virtual machines as well as using relational databases is essential to the success of this course. In addition, you should possess a functional understanding of the CA API Gateway itself and a working knowledge of editing policies within the policy manager. Finally, a strong background in web services, application servers and internetworking concepts will help provide a foundation of learning.

---

## COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- **One (1) Hour**
- Dynamic labs
- **Four to Six (4-6) Hours**
- Course Code: 04LSV2015S

---

## PREREQUISITES

- 04LSV10060: CA API Technical Overview
- 04LSV2012S: CA API Gateway 8.2: Foundations 200
- 04LSV2016S: CA Mobile API Gateway 2.x: Foundations 200

---

## What You Will Learn

- How to install and configure CA API Developer Portal
- How to integrate the Developer Portal with an existing API Gateway implementation
- How to execute internal roles and tasks to enable developers
- How to manage external roles and ensure a developer can use your Portal effectively and easily
- How to use reporting and analytics to manage usage of APIs and applications

---

## For Managers

The CA API Gateway product line protects applications exposed as web services, connects applications across security and identity domains, and validates policy compliance end-to-end across a transaction. The API Developer Portal enables organizations to onboard, manage and report on third-party developers and the applications that they build against APIs.

### WHO SHOULD ATTEND

- IT Facility Coordinator
- IT Security Manager
- IT Infrastructure Administrator/Engineer

### RECOMMENDED

#### NEXT COURSES

- CA API Management Library

## Course Agenda

### Module 1 – Install and Configure CA API Developer Portal

- Prepare a Gateway for integration
- Enable SSL with mutual authentication
- Configure a Developer Portal Appliance
- Access the Content Management System to configure the Portal
- Schedule data syncs between the Gateway and the Portal

### Module 3 – CA API Developer Portal External Roles and Tasks

- Execute tasks as a Developer or Organization Administrator
- Use the API Explorer
- Access the reporting features of the product

### Module 2 – CA API Developer Portal Internal Roles and Tasks

- Execute Administrative and API Owner Tasks
- Execute Business Manager and Account Manager Tasks
- Use the Web Administrator account to rebrand the Portal
- Set up developer forums for discussion, communication, and innovation
