OnDemand CA Application Lifecycle Conductor r2.4: End User Fundamentals 200

PRODUCT RELEASE

CA Application Lifecycle Conductor release 2.4

COURSE TYPE, LENGTH & CODE

- Web Based Training
- One (1) Hour and (30) Thirty Minutes
- 06ALC20030

PREREQUISITES

- Knowledge of software development lifecycle and software change management concepts

WHO SHOULD ATTEND

- Application Developer
- Application Manager
- Build Engineer
- Change Manager
- Release Manager
- Test Manager
- System Administrator

Course Overview

As the focus on application development changes from creating and updating applications for the mainframe to providing mobile and web access to their mainframe data and application logic in order to modernize them, organizations need a solution that can provide tighter integration of the processes and tools that support the application lifecycle, from design and development through deployment and monitoring. CA Application Lifecycle Conductor (CA ALC) is a single solution to manage all software assets, from mobile to mainframe; offering seamless integration to support the application lifecycle.

This course enables end users of CA ALC to effectively navigate through the client interface to review, add, and update items, query for items, and generate reports; thereby effectively manage application lifecycle processes with CA ALC.

What You Will Learn

- Create queries to search for items and manage query results
- Perform actions such as creating an item, updating an item, updating item relationships, and
- Generate reports in CA ALC

For Managers

Application development teams today have to work efficiently in an environment where the pace and depth of application development and deployment has increased exponentially. In order to do so, development teams need to find ways to successfully address all DevOps challenges, coordinate various tasks and activities, and achieve cross-functional communication.

In this course, development teams will develop the knowledge and skills required to use CA ALC to gain unified access to various tools involved in the software change management process and effectively use CA ALC to affect, track, and view all processes from a single comprehensive dashboard.

**RECOMMENDED
NEXT COURSES**

- OnDemand CA Application Lifecycle Conductor r2.4: Manage Software Development Lifecycle Activities 200; 06ALC20010; WBT

- CA Application Lifecycle Conductor r2.4: Administrator 200; 06ALC20040; ILT

Course Agenda

Module 1: Describe CA Application Lifecycle Conductor Functionality	Module 2: Create Queries to Locate Items
▪ Describe key functionality ▪ Identify user roles and functions	▪ Execute a predefined query ▪ Create adhoc queries

Module 3: View, Create, and Modify Items	
▪ Describe an item ▪ Perform actions on an item ▪ Generate reports
