

CA Workload Automation iDash Version 12.0: Installation and Configuration 200

Course Overview

CA Workload Automation iDash (CA iDash) is designed to help you consistently deliver on service level guarantees to your clients. It applies advanced predictive analytics in real time to create efficient and finely-tuned environments for CA Workload Automation AE and CA Workload Automation CA 7® Edition.

CA Workload Automation iDash is designed to help you visualize complex relationships more easily, proactively monitor SLA and Critical Path thresholds and alerts and execute recovery actions when thresholds are at risk of being missed.

This course focuses on installing CA Workload Automation iDash, Version 12.0, and configuring its unique components and functions so the student can take full advantage of the product.

PRODUCT RELEASE

CA Workload Automation iDash
Version 12.0

COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- 1.25 Hours
- 06IDH20050

PREREQUISITES

- CA Workload Automation iDash Version 12.0:
Introduction 100
Course Code: 06IDH10040
30 Minutes
