

OnDemand CA Capacity Management Current State Capacity Reporter 1.5: Foundations 200

Course Overview

The CA Capacity Management solution is designed to automatically collect and normalize performance and capacity utilization data from virtually any monitoring application to provide an objective measure of the overall efficiency of data center resource use, which provides for enterprise-level data center capacity and budget planning to support critical business applications.

This course offers you an in-depth experience with the installation, configuration, and administration of CA Current Capacity Reporter r2.6 (CA CCR). The course also teaches key insights into the CA Capacity Management architecture and the reporting of raw data as actionable technical and business information. You are provided with overviews, discussions, best practices, case studies, and hands-on lab simulations
