

CA Client Automation: Detecting Software Through Intellisigs

Course Overview

In this course for CA Client Automation you will learn when to use an Intellisig to collect software inventory data, how to create and register an Intellisig into a CA Client Automation infrastructure and view the collected results. Intellisigs offer an additional method of collecting software inventory from your machines inventoried with CA Client Automation

Note: This functionality is only supported in CA Client Automation release 12.5 SP1 with FP1 or higher, or in Client Automation release 12.8

PRODUCT RELEASE

CA Client Automation r12.5*/r12.8
*12.5 SP1 with FP1 or higher

COURSE TYPE, LENGTH & CODE

- Web-based Training(WBT)
- .5 hour
- Course Code: 14CLM20050

PREREQUISITES

- Familiarity with CA Client Automation
- Familiarity with DMS scripting

WHO SHOULD ATTEND

- Desktop Administrators
- IT Manager
- Asset Managers

What You Will Learn

- Anatomy of a Software Signature
- What an Intellisig Is
- Anatomy of the Intellisig
- New Intellisig DMS Functionality
- Intellisig Creation Process
- Step by Step Intellisig Creation

For Managers

This course will help your staff members understand how to use and create intellisigs. Intellisigs offer an additional method of collecting software inventory from your machines inventoried with CA Client Automation. The advantage of an intellisig is it allows the software collection tool to discover software using a script. This has an advantage over a simple software signature method. A signature can only look for the existence of a file or registry entry.

The discovered software can be used to drive targeting of patches or inventory of software to manage license compliance.
