

CA APM 10.1: What's New 100

Course Overview

CA Application Performance Management (CA APM) helps global brands proactively identify and resolve issues across physical, virtual, cloud and mobile applications. CA APM positions your organization to deliver app experiences where every user transaction becomes a loyalty building interaction, differentiate your business and allow you to protect your experts by focusing them only on impactful issues.

CA APM 10.0 added to the legacy of enterprise-level monitoring the ground breaking APM Team Center triage and analysis tool along with Differential Analysis metrics that point to changes in the environment worthy of your attention.

This course will review product enhancements delivered in the 10.1 release.
