

# CA PPM 14.3: Installation with Oracle 200 Bundle

---

## PRODUCT RELEASE

CA PPM 14.3

---

## COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)  
Two (2) Hours
- Self-Directed Labs  
Sixteen (16) hours
- Course Code: 33CLR2401S

---

## PREREQUISITES

- Operating system administration, such as Windows and Linux
- Experience with SQL queries
- Oracle Database knowledge

---

## WHO SHOULD ATTEND

- Implementation Consultant
- IT Architect
- Application Administrator
- System Administrator
- Database Administrator

## Course Overview

This is a self-directed CA Project and Portfolio Management (CA PPM) bundle that offers students an in-depth experience of all facets of installing the product. The bundle covers the entire product installation; from the identification and installation of the components and the configuration of the installed components, through to the post-installation configuration and administration tasks. This bundle will help you gain a comprehensive understanding of the setup, configuration, and optimization of your CA PPM installation. Bundle includes 33CLR24000, 33CLR24019 and 33CLR30500

This is a SELF-DIRECTED class consisting of 16 hours of self-directed learning including lab activities and two hours of web-based training.

---

## What You Will Learn

- Plan effectively by gaining an understanding of the CA PPM solution components and how they interrelate.
- Create an effective base environment for CA PPM.
- Build an effective and robust hosting environment for your CA PPM application by installing Apache Tomcat.
- Align projects and programs with strategies, goals & objectives by installing CA PPM.
- Properly prepare MS/SQL database to store and manage CA PPM application data.
- Enable users to run a wide range of useful reports by installing and configuring CABI.
- Customize CA PPM to meet specific IT requirements and extend the functionality of the product by integrating client applications.
- Help ensure continuous availability by backing up the application and the database.
- Monitor and increase process efficiency by using the process monitoring tool
- Increase efficiency by enabling load balancing on the system and prevent unauthorized access to CA PPM by creating effective expressions for custom password rules
- Optimize your customization options using database, index, and system tasks
- Enhance the OOB capabilities of your CA PPM instance by installing add-ins.

## For Managers

CA PPM provides an automated software solution to enable an organization to improve investment decision making, enhance productivity and efficiency, and quickly adapt to dynamic business conditions. In this course, students will prepare the environment and ensure that all the prerequisites are in place. They will then install and test the CA PPM product, and perform post-installation configuration. An awareness of the various configuration and administrative options will help ensure a trouble-free installation of the product, and save your team time and effort by making sure that your installation of CA PPM meets the needs of your particular organization from the beginning.

## Course Agenda – Installation Planning

Module 1 – Describe CA PPM	Module 2 – Describe the CA PPM Architecture
<p>Describe CA Clarity PPM solution components and how they interrelate</p>	<p>Identify Open Standards support</p> <p>Identify the features of the CA PPM architecture</p> <p>Describe how the CA PPM architecture is deployed on different databases and application servers</p> <p>Describe CA PPM system configurations</p>
Module 3 – Describe CA PPM System Administration	Module 4 – Plan the Installation
<p>Describe the basics of CSA</p>	<p>Gather installation information</p> <p>Identify the cA PPM installation steps at a high level</p>

**Module 11 – Build Password Expressions**

- Identify general password options
- Create password expressions

**Module 12 – Administer CA PPM Services**

- Manage CA PPM services

---

## Course Agenda - Post Installation Options and Extensions

**Module 1 – Describe Options and Extensions**

- Identify the available add-ins
- Install CA PA
- Describe how CA Clarity PPM extends to integrate with other systems
